

Leapfrog Works is the smarter way to **understand the underground**

Leapfrog Works gives civil and environmental engineers insights into the ground beneath their feet—leading to safer designs, lower costs, and fewer surprises.

Traditional methods

2D cross-sections
& hand-drawn interpretations

Tedious, manual updates when
new data comes in

Siloed tools for different
tasks and teams

Static models, difficult to share
without CAD team support

Toolbox solutions
with no end-to-end workflow

vs.

Leapfrog Works

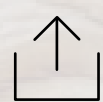

3D models that auto-generate
surfaces from geological data

Real-time model updates
as new data is added

Integrated workflows with
geotechnical software

Easily export and share scenes,
movies, and cross-sections

UI and workflow-based
design tailored to geologists

Strengthen your geotechnical analysis.

See how 3D modelling with Leapfrog Works reduces risk across civil and environmental projects.
